Math 33A
Linear Algebra and Applications

Practice Final

Instructions: You have 24 hours to complete this exam. There are 14 questions, worth a total of 100 points. This test is closed book and closed notes. No calculator is allowed. This document is the template where you need to provide your answers. Please print or download this document, complete it in the space provided, show your work in the space provided, clearly box your final answer, and upload a pdf version of this document with your solutions. Do not upload a different document, and do not upload loose paper sheets. Do not forget to write your name, section (if you do not know your section, please write the name of your TA), and UID in the space below. Failure to comply with any of these instructions may have repercussions in your final grade.

Name: ______________________________

ID number: ______________________________

Section: ______________________________

Problem 1. *10pts.*

Determine whether the following statements are true or false. If the statement is true, write **T** over the line provided before the statement. If the statement is false, write **F** over the line provided before the statement. Do NOT write "true" or "false".

(a) ___ If matrix A is in reduced row-echelon form, then at least one of the entries in each column must be 1.

(b) ___ If A and B are any two 3×3 matrices of rank 2, then A can be transformed into B by means of elementary row operations.

(c) ___ If A and B are matrices of the same size, then the formula $\text{rank}(A + B) = \text{rank}(A) + \text{rank}(B)$ must hold.

(d) ___ There exists an invertible $n \times n$ matrix with two identical rows.

(e) ___ The formula $AB = BA$ holds for all $n \times n$ matrices A and B.

(f) ___ If a square matrix A is invertible, then its classical adjoint $\text{adj}(A)$ is invertible as well.

(g) ___ All invertible matrices are diagonalizable.

(h) ___ If two matrices A and B have the same characteristic polynomials, then they must be similar.

(i) ___ All symmetric matrices are diagonalizable.

(j) ___ If A is an invertible symmetric matrix, then A^2 must be positive definite.

Problem 2. *7pts.*

If the rank of a 5×3 matrix A is 3, what is $\mathrm{rref}(A)$?

Problem 3. *8pts.*

Find the matrix of the linear transformation from $\mathbb{R}^3$ to $\mathbb{R}^3$ given by rotation about the z-axis through an angle of $\pi/2$, counterclockwise as viewed from the positive z-axis.

Problem 4. *8pts.*

Find the inverse of the linear transformation

$$T\begin{bmatrix} x_1 \\ x_2 \\ x_3 \\ x_4 \end{bmatrix} = x_1 \begin{bmatrix} 2 \\ 1 \\ 0 \\ 0 \end{bmatrix} + x_2 \begin{bmatrix} 5 \\ 3 \\ 0 \\ 0 \end{bmatrix} + x_3 \begin{bmatrix} 0 \\ 0 \\ 1 \\ 2 \end{bmatrix} + x_4 \begin{bmatrix} 0 \\ 0 \\ 2 \\ 5 \end{bmatrix}$$

from $\mathbb{R}^4$ to $\mathbb{R}^4$.

Problem 5. *7pts.*

For which value(s) of the constant k do the vectors below form a basis of $\mathbb{R}^4$?

$$\begin{bmatrix} 1 \\ 0 \\ 0 \\ 2 \end{bmatrix}, \begin{bmatrix} 0 \\ 1 \\ 0 \\ 3 \end{bmatrix}, \begin{bmatrix} 0 \\ 0 \\ 1 \\ 4 \end{bmatrix}, \begin{bmatrix} 2 \\ 3 \\ 4 \\ k \end{bmatrix}.$$

Problem 6. *7pts.*

Consider the plane $x_1 + 2x_2 + x_3 = 0$. Find a basis $\mathfrak{B}$ of this plane such that

$$\begin{bmatrix} 1 \\ -1 \\ 1 \end{bmatrix}_{\mathfrak{B}} = \begin{bmatrix} 2 \\ -1 \end{bmatrix}.$$

Problem 7. *8pts.*

Find the matrix B of the linear transformation

$$T(\vec{x}) = \begin{bmatrix} 13 & -20 \\ 6 & -9 \end{bmatrix} \vec{x} \quad \text{with respect to the basis} \quad \vec{v_1} = \begin{bmatrix} 2 \\ 1 \end{bmatrix}, \vec{v_2} = \begin{bmatrix} 5 \\ 3 \end{bmatrix}.$$

Problem 8. *7pts.*

Find an orthonormal basis of the kernel of the matrix

$$A = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 1 & 2 & 3 & 4 \end{bmatrix}.$$

Problem 9. *8pts.*

Find all the least-squares solutions $\vec{x}^*$ of the system $A\vec{x} = \vec{b}$ where

$$A = \begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{bmatrix} \quad \text{and} \quad \vec{b} = \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}.$$

Draw a sketch showing the vector $\vec{b}$, the image of A, the vector $A\vec{x}^*$, and the vector $\vec{b} - A\vec{x}^*$.

Problem 10. *8pts.*

Use Cramer's rule to solve the system

$$\begin{aligned} 3x + 5y + 3z &= 25 \\ 7x + 9y + 19z &= 65 \\ -4x + 5y + 11z &= 5. \end{aligned}$$

Problem 11. *8pts.*

For the matrix

$$\begin{bmatrix} 1 & 1 & 0 \\ 0 & 2 & 2 \\ 0 & 0 & 3 \end{bmatrix}$$

find all (real) eigenvalues. Then find a basis of each eigenspace, and diagonalize the matrix, if it can be done.

Problem 12. *7pts.*

Consider a matrix of the form

$$A = \begin{bmatrix} 0 & a & b \\ c & 0 & 0 \\ 0 & d & 0 \end{bmatrix}$$

where $a, b, c, d \in \mathbb{R}$ are positive. Suppose the matrix A has three distinct real eigenvalues. What can you say about the signs of the eigenvalues? Is the eigenvalue with the largest absolute value positive or negative?

Problem 13. *7pts.*

Find the matrix of the quadratic form $q(x_1, x_2) = 3x_1^2 + 4x_2^2 + 5x_3^2 + 6x_1x_3 + 7x_2x_3$.
